

Male wings:

Female wings:

**Supplementary Figure 1:** Tissues used for RNA adult wing libraries. Adult male wing tissues are shown in A, with white squares highlighting the position of androconia, sex pheromone producing cells and hairs on the fore- (top) and hind- (bottom) wings (as described in Nieberding et al 2008 PLoS ONE). Adult male wings were cut as in B and adult female wings were cut as in C.
